

Skin Disease Diagnosis Report

Lesion Name

Prediction: Melanocytic Nevi

Confidence score

Confidence: 34.70 %

Probabilities of lesion

Disease	Probability (%)
Actinic Keratoses	18.88
Basal Cell Carcinoma	14.88
Benign Keratosis-like Lesions	9.43
Dermatofibroma	14.53
Melanoma	6.15
Melanocytic Nevi	34.70
Vascular Lesions	1.42

Observation

Dropout CNN model have predicted that provided lesion have probability of this lesionThe heighest predicted probility lesion is Melanocytic Nevi with confidence of 34.70this is ai predicted lesion for better conformation please diagonissi with the nearby Hospitals . Therefore, Dropout CNN was selected as the final model for skin disease diagnosis and Explainable AI analysis.
